

HEALTHCARE

Preparing to Give Evidence

Rehearse clear, accurate testimony for medical negligence claims, criminal proceedings, and inquiries into deaths, with avatars playing coroner and counsel.

The facts do not change. The way you tell them can.

Short, repeatable sessions with conversational avatars playing a coroner, counsel, or other counterparts. Participants reconstruct the timeline and the records, answer questions under pressure, and receive rubric-based feedback on clarity, accuracy, reasoning, tone, structure, and empathy. Sessions are repeated to improve delivery without changing the facts. The substance of the testimony is never shaped to secure an outcome: the aim is to communicate it with integrity.

ALREADY DESIGNED

THE PROBLEMS WE SOLVE FOR HOSPITALS, MEDICAL SCHOOLS, AND HEALTHCARE ORGANIZATIONS

01 — THE FIRST TIME IS THE REAL TIME

Professionals meet the witness box with no rehearsal

Avatars playing coroner and counsel ask the questions the real ones will. The session is short, repeatable, and private; composure is built before it is needed.

02 — MEMORY, RECORD, AND INFERENCE BLUR

Under questioning, what was seen, what was written, and what is assumed run together

The reconstruction step and the rubric train the separation of fact from inference, and of recollection from record, before the first question is asked.

03 — CLINICAL LANGUAGE FOR A NON-CLINICAL AUDIENCE

Accurate answers that the court cannot follow

Feedback on clarity and structure for non-medical audiences, repeated until the testimony is both accurate and understood.

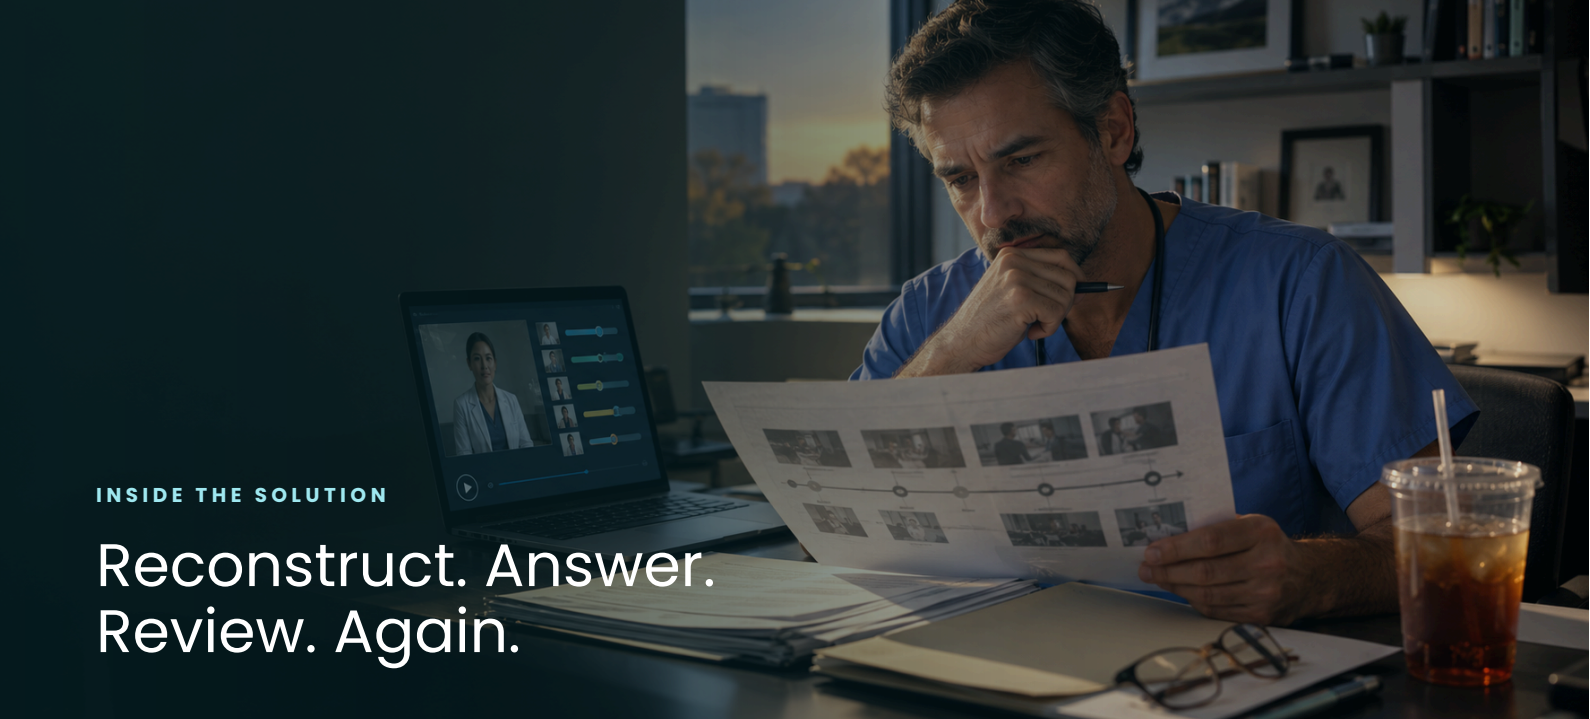

FOR WHOM

Physicians, nurses, midwives, and allied health professionals who may be called to give evidence; clinical governance, legal, and risk departments; medical defense organizations and insurers; hospitals and trusts preparing staff for inquests and inquiries.

FORMAT

Desktop or immersive courtroom; sessions of 10 to 15 minutes, individually or with a facilitator. Audience, jurisdiction, type of proceeding, witness role, and case records defined with clinical and legal experts. Simulation is training; it does not replace legal advice on a particular case.

INSIDE THE SOLUTION

Reconstruct. Answer. Review. Again.

- 01 Reconstruct**
Timeline, available records, and the limits of your knowledge. Direct observation separated from interpretation; recollection from record.
- 02 Answer questions**
Avatars playing a coroner, counsel, or other counterparts. Clarity and composure under questioning, including the questions you would rather not be asked.
- 03 Review feedback**
Clarity, accuracy, reasoning, tone, structure, and empathy. Repeated to improve delivery without changing the facts.
- 04 The Coroner's Court**
The documented case prepares for a coroner's inquest in England. With jurisdiction-specific legal design: fatal accident inquiries in Scotland, inquests in Victoria, Australia, procedures such as those in Wisconsin, USA.

WHAT YOU GET

A designed proceeding

Your jurisdiction, your type of hearing, your witness role.

Avatars as counterparts

Coroner, counsel, and others, with questions that do not spare you.

A six-criterion rubric

Clarity, accuracy, reasoning, tone, structure, empathy.

Expert design

Case records and questions built with clinical and legal experts.

Start with one proceeding

Choose one type of proceeding and the roles most often called to give evidence. We design the case records and the questioning with your clinical and legal experts, a group rehearses in short sessions, and we look together at what changed between the first answers and the last.

WORKS WITH DIFFICULT CONVERSATIONS

The conversation with the family after an adverse event and the testimony months later are two moments of the same story; both can be rehearsed with avatars.

PART OF THE HEALTHCARE OFFER

One of the five e-REAL Healthcare solutions, with Clinical Reasoning with Simulated Patients, Difficult Conversations, Team Readiness and Emergency Practice, and Artificial Intelligence in Healthcare.
